

Wild Flowers – June 2010

Philip Fry (right) gave an extremely informative session; first using a series of slides to provide details about the conditions necessary for a wildflower garden (including climate, topography, soil types, drainage, and the natural processes of plant succession). He then provided specific information on plants suitable for shade and sunny gardens for this part of Ontario. He also had brought a whole range of plants with him that he enthusiastically discussed, noting their merits and growing conditions.

For further details on Phillip Fry and his landscape garden restoration project; “The Old-Field Garden Project”, go to www.oldfieldgarden.on.ca .
